Generac PWRmicro Named Best in Show in 2026 Solar Power World Top Products Awards

November 17, 2026

High-power microinverter recognized for innovation, installer benefits and ability to maximize the potential of today's high-output solar panels

WAUKESHA, Wis., Nov. 17, 2026 /PRNewswire/ -- Generac Holdings Inc. (NYSE: GNRC), a leading global designer, manufacturer and provider of energy technology solutions and other power products, announced that the Generac PWRmicro microinverter has been named a Best in Show winner in the residential category of the 2026 Solar Power World Top Products Awards.

PWRmicro was one of only five residential products to receive the Best in Show distinction this year. The awards recognize innovative products across the solar and storage industry, with entries evaluated on factors including originality, market promise and value to installers.

"PWRmicro reflects our commitment to developing innovative energy technologies that make solar simpler and more valuable for homeowners and installers," said Norm Taffe, Executive Vice President & President, Generac Home. "This recognition reinforces the tremendous work our teams have done to develop a high-performance, durable solution designed around the needs of today's solar market. Technologies like PWRmicro give homeowners more flexibility in how they generate, manage and use energy."

PWRmicro, Generac's high-power microinverter, is designed to convert solar energy into usable power for the home while pairing with today's larger, higher-output solar panels. Each unit connects to two panels and manages their output independently, helping reduce the number of devices needed on a typical roof while maximizing solar production. Built for long-term durability, more than 1,200 PWRmicro units have undergone 2.5 million hours of accelerated stress testing, with the testing program reviewed by an independent, third-party engineering and certification firm. Generac microinverters have also surpassed 5 million operating hours in the field.

As part of the Generac Home Energy System, PWRmicro helps homeowners take control of their energy and strengthen resilience, providing greater flexibility to produce, store and manage power as El Niño and other extreme weather patterns strain energy reliability**.**
